SKYLER
KAPEL

Dear Claire's Team,

The Packaging Designer role at Claire's carries significant impact, and I know firsthand how critical packaging is to driving product conversion and brand affinity. With extensive experience taking designs from initial concepts through to production ready dielines, material selection, and unboxing experiences, I am confident in my ability to take ownership of this category for your team.

In my current role at Mylarmen, packaging is at the core of my daily responsibilities. My work spans the entire product lifecycle, from concepting and structural design to building mechanical print files for mass production and creating complementary marketing materials. I view packaging not just as functional protection, but as the primary vehicle for communicating a brand's identity and value to the consumer.

I collaborate closely with client account managers and manufacturing partners to produce bold, high impact packaging that honors both budget targets and production scalability. For instance, I developed a custom box modeled after a V8 engine for a racing themed brand, organizing product components to mirror internal engine mechanics. Additionally, I designed an interactive, fold out structure for a holistic wellness tincture that integrated product usage guides while adhering to structural engineering and material constraints.

Beyond my formal education in Industrial Design, my background in graphic design, a skill I have been honing since I first started working on computers, directly complements my work with packaging structures. I focus on ensuring that the graphics on the package match the physical structure itself in a balanced way to maximize total impact.

I would love the opportunity to discuss how my structural design skills, print production background, and brand first approach can support Claire's packaging line.

Thank you for your time and consideration,

Skyler
